Personal Profile

Cloud Engineer with a BSc in Informatics, operating Alibaba Cloud and Kubernetes infrastructure in the FinTech sector since 2023. Focused on high-availability design, policy-as-code, PCI DSS compliance, and cost control.

Work Experience

PT Nusa Satu Inti Artha *Jakarta, Indonesia*

System & Cloud Engineer *September 2023 - Present*

- Operate the production Alibaba Cloud estate across Indonesian and Malaysian regions: ECS, RDS, OSS, RAM, ACK, VPC/VSwitch, DNS, and Load Balancers, deployed with Helm.
- Raised platform uptime from 99.95% to 99.995% (approx. 4.4 hours to 26 minutes of annual downtime) across ECS, RDS, and ACK through scheduled maintenance to company SOP.
- Increased server and cloud capacity to absorb traffic spikes of up to 20% without downtime using auto-scaling and specification-matched instances, and cut incident handling time by 10% through alerting and monitoring automation.
- Migrated remaining on-premises services and infrastructure to Alibaba Cloud, provisioning production RDS instances and managing database access through users and network whitelists.
- Introduced Terraform as the infrastructure-as-code standard across all environments, using an OSS remote state backend, modular configuration, and GitLab CI pipelines, including automated disk snapshot and patching.
- Introduced Kyverno as an admission policy engine where none existed, enforcing resource limits across all clusters (sandbox, SIT, production) to cut worker node usage; reduced cloud spend further by trimming log indexing volume and tuning node autoscaling.
- Applied topology spread constraints with the descheduler to distribute pods evenly across availability zones, preventing a single-zone failure from causing a total outage.
- Mitigated critical-priority vulnerabilities across production ECS and ACK workloads, facilitated quarterly ASV scans, and author PCI DSS documentation spanning hardening, patching, access control, endpoint security, logging, and intrusion detection – recurring assessments passed with all findings closed.

PT Pundi Mas Berjaya *Batam, Indonesia*

Server Management Intern *August 2022 - December 2022*

- Maintained and monitored physical and virtual server hardware, network logging, and DNS for an on-premises environment.
- Deployed containerised and virtualised workloads; set up email services.

Dinas Kesehatan Prov. DIY *Yogyakarta, Indonesia*

Web Admin Intern *July 2022 - August 2022*

Deployed and maintained public health agency web services.

Skills

Cloud & IaC	Alibaba Cloud, Google Cloud Platform, Terraform
Kubernetes	ACK, Helm, Kyverno, OKD, Descheduler, Docker, Podman
Networking	VPC, DNS, Load Balancers, Haproxy, Nginx, Wireguard, OpenVPN, firewalld, UFW, GNS3
Systems	Linux (Debian, Ubuntu, Alma, Fedora, NixOS), Systemd, LDAP, Proxmox, Qemu, iDRAC
Data	MySQL, MariaDB, Apache Kafka
Programming	C, Bash, Java, Javascript, Latex, Lua, Nix, PHP, SQL
Monitoring	Datadog, CloudMonitor, ARMS, Log Service
Security	Alibaba Cloud Security Center, ClamAV, OSSEC
Miscellaneous	Git, GitLab CI, Vim/Neovim

Education

Universitas Teknologi Digital Indonesia *Yogyakarta, Indonesia*

Bachelor of Informatics (S1) *2019 - 2023*

- GPA 3.72/4.00
- Participated in the Kampus Merdeka program, batches 1 and 3
